experience

SUMMARY

Roman has expertise in React, React Native, Node.js, and experience in such domains as e-commerce, fintech, and healthcare. He is excited about the projects that involve a social factor and are meant to help people.

TECH STACK

/years

React 2,5	Node.js 1	React Native 2
TypeScript		Next.js 0.5

Other Technologies:

Firebase, AWS, Git, MongoDB, MySQL, Cordova, Firebase, Redux, Redux Saga, GCP, Javascript, Stripe, Plaid

EXPERIENCE HIGHLIGHTS

Atoka Pocket (Sep 2021 - Dec 2021)

The application allows users to create invoices and propose their work for another customer in Italia. Also, a user could see some dashboards with his income and so on.

Role:

Mobile developer

Roman was responsible for creating new screens for application. Wrote tests and implemented new designs. Also, he managed translations and implemented a new flow for unauthorized users.

Tech Stack: React-native, Redux

Under NDA (Sep 2020 - Sep 2021)

The website allows you to rent places for work in the office or table in co-working around the world. Custom solution for e-commerce. By using the site people book desks/offices, etc that match their locations. Users can add guests, buy products and visit events inside the co-working.

Role:

Front-end developer

Roman developed features (register guests, events registration). Added custom UI elements and wrote unit tests. He was responsible for code refactoring. Also, Roman worked on real-time notifications and re-designed some old pages.

Tech Stack: React, Typescript, React-Query, GQL

Moxie (Jun 2020 - Nov 2020)

An educational mobile app where any person can find a mentor in different areas of expertise. By using custom goals, and video/text chat, users increased their skills in different areas.

Role:

Full-stack developer

Roma developed features (text chat, goals logic). He also was responsible for mentoring other team members and refactoring part of the code.

The main challenge was migration from Cordova to React-Native.

Tech Stack: React, Cordova, React-Native, AWS, Firebase, RealTime DB, Auth, Functions

Beemf (Jan 2019 - Aug 2020)

Mobile app for people to connect them by interest in the nearest location, by geolocation and Bluetooth.

Role:

Mobile developer

Roman was responsible for mobile part architecture and developing features. Worked on improving design mocks and resolving issues with native ios and android platforms.

Tech Stack: React Native, Node.js, MongoDB, GQL

Pangnote (Sep 2018 – Mar 2019)

The website for the aggregation of ethernet providers, VoIP companies with their own services such as 'whois', 'BGP check', etc. By using these services people also ask for sell/rent IP v4 addresses and sub-networks.

Role:

Full-stack developer

Roman developed features (such as DNS lookup, whois, etc). He managed the database and improved UI, and also parsed sites for contacts.

Challenges on this project: direct work with Mongo, adding network utilities, parsing creation (was the biggest one because of the huge complexity and wide variety of contacts formatting).

Tech Stack: Meteor, React, MongoDB, Node
